

Syuzhet

Predictions Markets Need to Mature...

Traders can:

1. create long-standing prediction assets
2. long these "forecast" assets
3. short them as well
4. hedge positions
5. make capital based on narratives & accuracy of predictions.
6. arc native prediction assets that play like traditional equities

Philip Park - CTO / CEO/ Founder

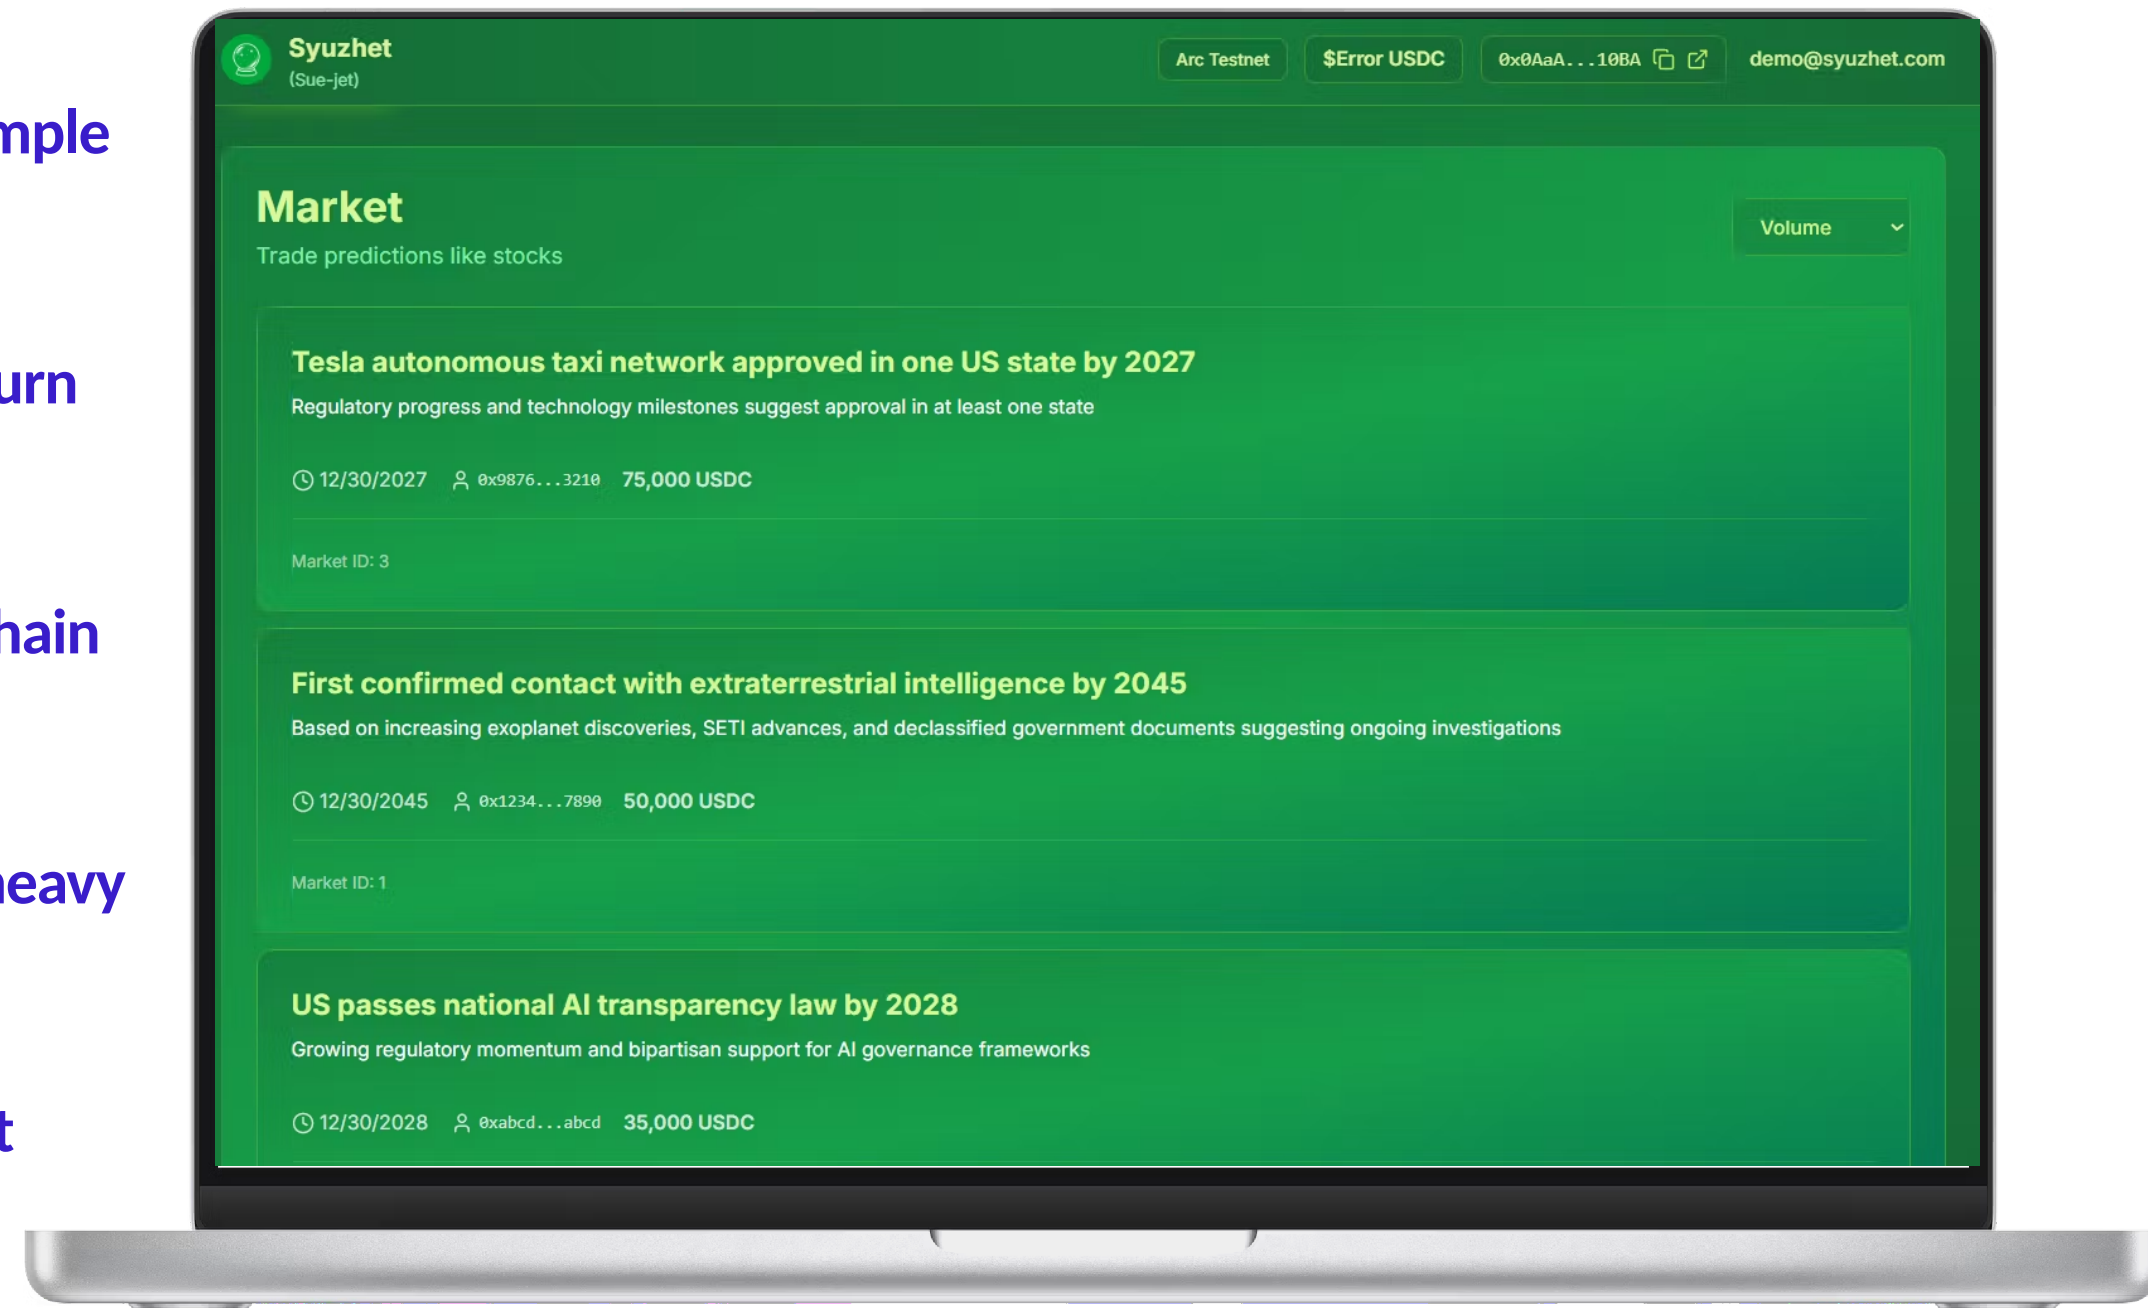

Tech Stack

Syuzhet is built as an AI-first, on-chain-native platform that can scale from hobby traders to institutional foresight funds.

- **Frontend:** Next.js 14, TypeScript, Tailwind — a Robinhood-simple interface for creating and trading prediction assets.
- **AI Layer:** OpenAI LLMs orchestrated via custom prompts to turn messy research into structured, tradable foresight theses.
- **Rust Services:** High-performance Rust microservices for on-chain indexing, simulation, and risk/portfolio logic.
- **Backend Orchestration:** Node/TypeScript APIs plus Rust for heavy lifting, deployed on Vercel and edge runtimes.
- **Dev & Contracts:** Hardhat + Solidity for the prediction market protocol, with typed contract helpers on the client.
- **Agent Infrastructure:** Raindrop (Liquid Metal AI) and Claude Code integration for agentic workflows, corpus ingestion, and iterative model-driven development.

On-Chain Design

Syuzhet is not just “AI + trading” — it’s a fully on-chain foresight protocol.

- **Arc L1 (EVM):** All markets settle on Arc, an EVM-compatible Layer-1 where USDC is native gas and collateral.
- **USDC Collateral:** Every prediction asset is USDC-backed, making returns intuitive and stablecoin-denominated.
- **Prediction Market Contracts:** Solidity smart contracts mint and manage Syuzhet markets as long-lived, programmable assets.
- **Account Abstraction:** Dynamic for web3 login today, with Circle Wallets scaffolded for smart wallet UX & enterprise-grade custody.
- **Rust + Chain Data:** Rust services consume Arc events, compute narrative & pricing analytics, and feed insights back into the UI & AI agents.
- **Composability:** Designed to plug into DeFi primitives (lending, LPing, structured products) so prediction assets can be longed, shorted, or hedged like equities.

The Vision

Syuzhet is a speculative foresight platform where intuition becomes a liquid asset. Users can transform their insights, research, and hunches into on-chain prediction assets that others can long, short, or hedge. Connect directly into your chosen local directories and have the agent bundle up this prop data into deployable apis, on-chain, regulated by you, the DAO, or by other agents.

Each prediction behaves like a living market—its value shaped by belief, participation, and evolving discourse—creating a new class of narrative liquidity where imagination fuels market momentum.

Syuzhet turns foresight into a financial instrument, letting traders express conviction, creativity, and strategy at the high-leverage intersection of AI, finance, and human intuition.

Be the *Michael Saylor* of the foresight markets
